

How to measure for ...

This will definitely save you a trip!

Easy to measure & will help you make choices

Changing just the Existing Glass

Open the door...

On the Door measure:(inches)

- ① Door width = _____
- ② Door height = _____
- ③ Visible glass height = _____
- ④ Visible glass width = _____

Sidelights only:

Exposed visible glass

- ⑤ Width visible = _____
- ⑥ Height visible = _____

1. Measure the **EXPOSED** glass only, in inches, without going onto the frame around the glass. And, excluding the door frame, measure the **WIDTH** and **HEIGHT** of just the door.

2. Whether, it's a sidelight or a door with glass, take a **closeup digital picture of the frame** around the glass from the inside and the outside.

3. Bring a **picture of your home** with you. If you need help, we will help you coordinate the front door with the rest of your home.

For multiple doors in the home, just do the same measuring. It's easy to determine the correct size once you are in the store with this information.
